

Sepal.Length

A PCA plot showing the separation of three Iris species: *setosa*, *versicolor*, and *virginica*. The x-axis is labeled 'Species' and the y-axis is labeled 'setosa'. The *setosa* species is represented by a black dot, while *versicolor* and *virginica* are represented by red dots. A blue line represents the decision boundary between the species.

Sepal.Width

2

A PCA plot showing the distribution of three species: *setosa*, *virginica*, and *versicolor*. The plot is enclosed in a light blue ellipse. The *setosa* species is represented by a black dot in the upper left. The *virginica* and *versicolor* species are represented by black dots in the lower right, with a red vertical error bar indicating variability. The x-axis is labeled 'Species'.

A PCA plot showing the distribution of three species: *setosa*, *virginica*, and *versicolor*. The plot is a scatter plot with a light blue shaded elliptical region representing the overall distribution. The x-axis is labeled 'Species' and the y-axis is labeled 'Error'. The *setosa* species is represented by a black dot, while *virginica* and *versicolor* are represented by red dots. A red vertical ellipse highlights the cluster of *virginica* and *versicolor* species.

Species

2.5

Petal.Width

0.1

A scatter plot illustrating the relationship between Species (virginica, versicolour, setosa) and a variable labeled 'Error'. The plot shows a large blue oval boundary and a red shaded region labeled 'Error'.
