

Sepal.Length

A PCA plot showing the distribution of species. The x-axis is labeled 'Species' and the y-axis is labeled 'setosa'. Three points are plotted: 'virginica' (red), 'versicolor' (black), and 'setosa' (black). A blue ellipse encloses the 'virginica' and 'versicolor' points, while the 'setosa' point is outside this ellipse.

A PCA plot showing the distribution of four species: *virginica*, *versicolor*, *setosa*, and *eru*. The x-axis is labeled 'Species' and the y-axis is labeled 'Species'. The plot shows a clear separation between the species, with *virginica* and *versicolor* clustered together, *setosa* separated, and *eru* as a single point. A blue line represents the principal component.

Sepal.Width

2

A PCA plot showing the distribution of three species: *setosa*, *virginica*, and *versicolor*. The plot is enclosed in a light blue ellipse. The *setosa* species is represented by a black dot in the upper left. The *virginica* and *versicolor* species are represented by black dots in the lower right, with a red vertical error bar indicating variability. The x-axis is labeled 'Species'.
