

Sepal.Length

A PCA plot showing the first two principal components (PC1 and PC2) for three species of Iris: setosa, versicolor, and virginica. The x-axis is labeled 'PC1' and the y-axis is labeled 'PC2'. The 'setosa' species is represented by a black dot and is clearly separated from the other two. The 'versicolor' and 'virginica' species are represented by red dots and are clustered together, with some overlap between them. A blue line is drawn through the plot, likely representing a decision boundary or a principal component.
