A PCA plot showing the distribution of three Iris species: *setosa*, *virginica*, and *versicolor*. The plot is a scatter plot with a large blue ellipse representing the overall data spread. The *setosa* species is clustered on the left, while *virginica* and *versicolor* are clustered on the right. A red ellipse labeled "Error" is centered on the *virginica* and *versicolor* cluster. The x-axis is labeled "Species".

A PCA plot showing the distribution of three species: *setosa*, *virginica*, and *versicolor*. The x-axis is labeled 'Species'. The *setosa* species is represented by a black dot in the upper left. The *virginica* and *versicolor* species are represented by black dots in the lower right, with a red vertical error bar indicating variability. A large blue ellipse encloses the *virginica* and *versicolor* points, and a smaller red ellipse encloses the error bar for *versicolor*.
