

bill_length

A Venn diagram illustrating the overlap of genetic markers between three penguin groups: Adelie (orange oval), Gentoo (green oval), and Chinstrap (purple oval). The intersection of all three groups is labeled 'pooled' and is shaded gray. The intersection of Adelie and Gentoo is labeled 'Adelie + Gentoo' and is shaded light orange. The intersection of Gentoo and Chinstrap is labeled 'Gentoo + Chinstrap' and is shaded light green. The intersection of Adelie and Chinstrap is labeled 'Adelie + Chinstrap' and is shaded light purple. The regions where only one group is present are labeled 'Adelie only' (orange), 'Gentoo only' (green), and 'Chinstrap only' (purple).

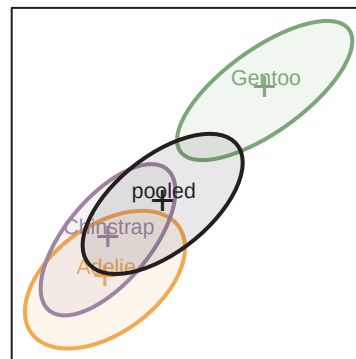

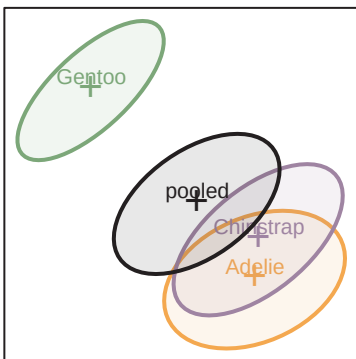

Figure 1 is a Venn diagram illustrating the overlap of genes between three datasets: Adelle (orange), Gentoo (green), and Chinstrap (purple). The intersection of all three datasets is labeled 'pooled'.
