A PCA plot showing the distribution of four species: *virginica*, *versicolor*, *setosa*, and *Species*. The plot is a scatter plot with a blue shaded ellipse representing the overall distribution. The species names are labeled near their respective data points. The *setosa* species is located at the bottom left, *versicolor* is in the middle, and *virginica* is at the top right. The *Species* label is at the top right corner of the plot.

A scatter plot showing the relationship between 'Species' (x-axis) and 'Error' (y-axis). The x-axis is labeled 'Species' and the y-axis is labeled 'Error'. A blue diagonal line represents the identity line (y=x). Three data points are plotted, each with a red shaded error region. The points are labeled 'virginica', 'versicolor', and 'setosa'. The 'setosa' point is a black dot on the identity line. The 'virginica' and 'versicolor' points are red dots above the identity line, with 'virginica' having a larger error region.

A scatter plot showing the relationship between Species and Sepal.Length. The plot features three species: setosa, virginica, and versicolor. A large blue ellipse encompasses all data points. A smaller red dashed ellipse highlights the virginica and versicolor groups, with a red arrow pointing to the word 'Error'.

A PCA plot showing the distribution of three Iris species: setosa, virginica, and versicolor. The x-axis is labeled 'Species'. The plot shows a large light blue ellipse representing the overall data distribution. A red ellipse labeled 'Error' is centered around the 'virginica' and 'versicolor' points, indicating a region of uncertainty or error in the classification.

A scatter plot illustrating the distribution of three Iris species: virginica, versicolor, and setosa. The plot is enclosed in a large blue ellipse. The species names are labeled near their respective data points. A red ellipse highlights the overlap between virginica and versicolor, with a red arrow pointing to the word "Error".
